

Increase Confidence, Reduce Complaints, and Save Money

PCE has a history of helping water treatment facilities optimize their process trains and plant operations, reduce complaints, and save money.

In the past, PCE has reviewed and helped optimize water plants and plant operations for Brooklyn Park, Grand Rapids, Minneapolis, Redwood Falls, the Minneapolis/St. Paul Air Force Base, and the Imation Company. We have also worked in completing water quality studies for the Cities of Aitkin, Anoka, Brainerd, Hopkins, New Ulm, and Robbinsdale. PCE has helped water systems:

- Reduce chemical and pumping costs.
- Lengthen filter life.
- Reduce the volume of filter backwash water sent to waste.
- Reduce lead and copper levels in water at the consumer’s tap.
- Mitigate red and black water occurrences.
- Control odors in water at the consumer’s tap.
- Increase operational confidence and comprehension.
- Avoid large unnecessary capital expenditures.
- Increase confidence of council, commission, and consumers.

PCE can provide such assistance on a project-by-project or hourly rate basis. We look forward to contributing to the operational success of water treatment facilities.
